

Taxottic for Firms

Year-round tax forecasting for the people you already serve

Prepared by: Techno Optics LLC (Taxottic) Effective: 2026-05-04 Owner: Sales & Partnerships, Techno Optics LLC Contact: contact@taxottic.com

1. Executive summary

Taxottic gives an accounting or tax-prep firm a year-round forecasting cockpit for every individual and business client on its book. Bank feeds via Plaid land in the right Schedule C / 1040 buckets automatically. A clean dashboard shows each client's current-year tax exposure, deduction opportunities, and quarterly-estimate posture. Bella, the in-app assistant, answers tax questions for staff and clients in plain English.

Pricing is deliberately simple: a flat per-client annual fee, billed monthly, that covers everything needed to keep that client's forecast accurate. Three tiers let the firm match price to client complexity:

Tier	Per client / year	Target client
Essentials	\$50	W-2 individuals (1040), light Schedule C
Professional	\$100	Sole props, single-member LLCs, light S-corps
Enterprise	\$150	Multi-entity, heavy Schedule C, K-1 partners, complex S-corps

A firm pays only for active client engagements. There is no per-staff seat fee at any tier; staff log in under the firm's account and operate every client the firm has paid for.

2. What the firm gets

For every paid client engagement, the firm receives:

- **Year-round tax forecast.** Federal + state liability projection that updates as new transactions arrive. The forecast surfaces under-withholding before April, not after.
- **Automated bank ingest.** Plaid-powered bank, credit-card, and brokerage feeds. Transactions land already split between income and expense, mapped to the IRS deduction master list (1,025 line items).
- **Schedule C export.** One-click export of the year-to-date Schedule C, ready for the firm's tax software at filing time. CSV + JSON formats; no rekeying.

- **Quarterly estimate calculator.** Auto-computed Q1–Q4 estimated payments with safe-harbor logic. The firm can review and adjust before sending to the client.
- **Bella (in-app assistant).** Answers tax questions in plain English for both staff and clients. The firm decides whether clients can converse with Bella directly or only through the staff portal.
- **Document vault.** Encrypted storage for prior-year returns, organising statements, and IRS notices. AES-256 at rest, TLS in transit, SOC-aligned controls (see §6).
- **Client portal.** Each client gets a low-friction sign-in (passkey, Google, Microsoft) and a dashboard tailored to their entity type. Branding follows the firm's, not Taxottic's, on all higher tiers (see §3).

3. Pricing tiers, in detail

Feature	Essentials (\$50)	Professional (\$100)	Enterprise (\$150)
Year-round forecast	Yes	Yes	Yes
Bank feeds via Plaid	1 Item / client	Up to 3 Items / client	Unlimited Items
Schedule C export	Yes	Yes	Yes
Quarterly estimates	Yes	Yes	Yes
Bella, in-app assistant	Yes	Yes	Yes
Document vault	100 MB / client	1 GB / client	Unlimited
Client portal	Yes	Yes	Yes
Firm white-label (logo + domain)	—	Yes	Yes
Multi-entity support (S-corp, partnership)	—	Limited	Full
K-1 ingest and pass-through tracking	—	—	Yes
Priority support, 1-business-day SLA	—	Yes	Yes
Dedicated account manager	—	—	Yes
API access	—	—	Yes

A firm can place each engagement on whichever tier matches the client. The firm is billed for the actual mix monthly, with one invoice covering every engagement.

4. Worked-out examples

The numbers below assume a steady-state firm with no churn. Real numbers vary; revisit at month 3 and month 12.

Solo CPA / EA — 50 clients, mixed mix

Mix: 30 W-2 individuals (Essentials), 18 sole-props (Professional), 2 S-corps (Enterprise).

Item	Math	Total
Annual revenue to Taxottic	$30 \times \$50 + 18 \times \$100 + 2 \times \$150$	\$3,600
Monthly invoice	$\$3,600 / 12$	\$300
Time savings (firm-side)	~3 hours / week recovered, conservatively	\$11K – \$20K / year saved labour

For the firm: \$300/month covers automated bookkeeping for the entire client base. The hours the firm reclaims are the real ROI; the line-item cost is a rounding error against billable rates.

Small firm — 200 clients, 3 staff

Mix: 120 Essentials, 70 Professional, 10 Enterprise.

Item	Math	Total
Annual revenue to Taxottic	$120 \times \$50 + 70 \times \$100 + 10 \times \$150$	\$14,500
Monthly invoice	$\$14,500 / 12$	~\$1,210
Per-client average	$\$14,500 / 200$	\$72.50

A firm at this scale typically spends 20–30 hours/week on bank-statement reconciliation across all clients. Replacing that with Plaid + Taxottic auto-categorisation pays for the platform inside the first quarter.

Mid-sized firm — 1,000 clients, 12 staff

Mix: 600 Essentials, 350 Professional, 50 Enterprise.

Item	Math	Total
Annual revenue to Taxottic	$600 \times \$50 + 350 \times \$100 + 50 \times \$150$	\$72,500
Monthly invoice	$\$72,500 / 12$	~\$6,040
Per-client average	$\$72,500 / 1,000$	\$72.50
Volume discount available	5,000+ clients	10–20% off list

Mid-sized firms also unlock the white-label portal at this size: clients sign in to `clients.<your-domain>.com`, the email templates carry the firm's logo, and Bella's introduction line names the firm.

5. Implementation

The firm goes live in three steps. Most firms are billing their first invoice within two weeks of the kickoff call.

1. **Kickoff and tenant provisioning (Day 1–3).** Firm signs the order form, picks a default tier, and chooses a subdomain. We provision the tenant, white-label assets, and a production Plaid integration.
2. **Staff onboarding (Day 3–7).** A 30-minute training covers the dashboard, the review queue, the Schedule C export, and Bella. We provide a written runbook the firm can keep on its intranet.
3. **Client onboarding (Day 7–30).** The firm invites clients in batches via the bulk-import tool. Each client receives a magic-link email; on first sign-in they connect their bank in under 90 seconds.

After onboarding, the platform is hands-off for the firm. Bank feeds sync automatically (see §7), forecasts update nightly, and the review queue surfaces only the transactions Taxottic was uncertain about.

6. Security and compliance

Taxottic is built for the regulated workflow firms operate in:

- **SOC-aligned controls.** Information Security Policy, Access Control Policy, Vulnerability Management Policy, and Data Retention and Disposal Policy are documented and reviewed at least annually. Policies are available on request.
- **Plaid Production review passed.** All four security attestations (vulnerability scanning, defined access control policy, zero-trust architecture, secure tokens and certificates) are attested and accepted by Plaid as of 2026-05-04.
- **Encryption.** AES-256 at rest, TLS 1.2+ in transit. Bank access tokens are encrypted with a key held outside the database; webhooks are JWT-verified against Plaid's published JWKS.
- **MFA.** Phishing-resistant authentication via passkeys (WebAuthn) and federated SSO (Google, Microsoft) for both staff and clients. Critical-systems access requires hardware-backed MFA at the IdP.
- **Data residency.** All client data resides in the United States (Supabase / AWS us-east-1). Backups are encrypted and retained for 30 days.
- **Right to deletion.** Per the Data Retention Policy, we delete a client's personal data within 30 days of a documented deletion request, and within 90 days from encrypted backups.

Full policies and the monthly compliance audit reports are made available to firms in their tenant's compliance section.

7. How the platform stays cost-efficient

Taxottic is engineered so per-client cost is predictable and bounded. This is what lets us hold list prices flat through 5,000 clients:

- **Bank syncs are throttled to one Plaid pull per connection per calendar month.** Webhooks acknowledge instantly but do not trigger a fresh API call once the month's pull has happened. The first sync after a new connection is bounded to year-to-date, not the default 24 months of history.

- **Forecasts recompute incrementally.** Adding a transaction touches one row, not the full forecast.
- **AI usage is metered.** Bella conversations route through our enterprise Anthropic agreement with caching; the firm sees a single Bella line on the invoice rather than per-token surprise charges.

A firm that wants to true-up an out-of-month sync can hit the "Sync now" button on any connection at any time without affecting the monthly bill.

8. Terms

- **Billing.** Monthly invoice, Net 15. Stripe ACH or card. The first invoice is prorated to the kickoff date.
- **Contract length.** Month-to-month after the first three months. The first three months are committed to allow for onboarding investment.
- **Mid-tier upgrades and downgrades.** A client engagement can be moved between tiers at any time; the change is prorated on the next invoice.
- **Termination.** Either side can terminate with 30 days written notice. On termination, the firm receives a CSV export of every client's transactions, forecasts, and stored documents.
- **Pricing freeze.** List prices in this proposal are guaranteed for the firm's first 24 months. After that, increases (if any) are capped at the lesser of CPI or 5% per year.

9. Next step

If the firm is ready to move forward, the order form is one page and lives at:

<https://taxottic.com/firms/order>

Pick a default tier, list the staff who need login access, choose a subdomain, and we book the kickoff call within 48 hours.

Questions: contact@taxottic.com.
